

Portfolio view

Eye-derived demand across disease targets

21 screened patients · 11 targets · structures from AlphaFold and the PDB, drugs from ChEMBL

Highest opportunity: NR3C2 (Mineralocorticoid receptor). 18 of 21 screened patients carry a linked finding; 3 approved and 0 pipeline drugs; label: Validated, room to differentiate.

Opportunity matrix

Demand is detected non-invasively from retinal screening; saturation is the number of approved drugs; bubble size is the clinical pipeline. Quadrants frame discussion and are not valuations.

Ranked targets

Opportunity = 100 x demand share x (0.5 + 0.5 x structural confidence) x novelty (1.2 clinical-stage only, 1.0 fewer than 5 approved, 0.7 crowded).

Target	Organ	Patients	Approved	Pipeline	Structure	Opportunity	Label
NR3C2 Mineralocorticoid receptor	kidneys	18	3	0	model 56	67	Validated, room to differentiate
GLP1R Glucagon-like peptide-1 receptor	metabolism	21	7	3	pocket pLDDT 86	65	Crowded
AKR1B1 Aldose reductase	nerves	13	2	2	pocket pLDDT 98	61	Validated, room to differentiate
AGTR1 Angiotensin II receptor type 1	heart	18	7	0	pocket pLDDT 95	58	Crowded
ACE Angiotensin-converting enzyme	heart	18	10	0	pocket pLDDT 93	58	Crowded

Target	Organ	Patients	Approved	Pipeline	Structure	Opportunity	Label
SLC5A2 Sodium/glucose cotransporter 2 (SGLT2)	kidneys	18	8	0	pocket pLDDT 92	 58	Crowded
CACNA2D1 Voltage-gated calcium channel subunit alpha-2/delta-1	nerves	13	2	1	model 87	 58	Validated, room to differentiate
PRKCB Protein kinase C beta	eyes	4	0	2	model 86	 21	Unmet need
VEGFA Vascular endothelial growth factor A	eyes	4	6	3	pocket pLDDT 95	 13	Crowded
ANGPT2 Angiopoietin-2	eyes	3	1	7	model 84	 13	Validated, room to differentiate
PPARA Peroxisome proliferator-activated receptor alpha	eyes	4	8	2	model 80	 12	Crowded
