# Eye-derived demand across disease targets

21 screened patients · 11 targets · structures from AlphaFold and the PDB, drugs from ChEMBL

**Highest opportunity: NR3C2** (Mineralocorticoid receptor). 18 of 21 screened patients carry a linked finding; 3 approved and 0 pipeline drugs; label: Validated, room to differentiate.

## Opportunity matrix

Demand is detected non-invasively from retinal screening; saturation is the number of approved drugs; bubble size is the clinical pipeline. Quadrants frame discussion and are not valuations.

## Ranked targets

Opportunity = 100 x demand share x (0.5 + 0.5 x structural confidence) x novelty (1.2 clinical-stage only, 1.0 fewer than 5 approved, 0.7 crowded).

| Target                                           | Organ      | Patients | Approved | Pipeline | Structure       | Opportunity | Label                            |
|--------------------------------------------------|------------|----------|----------|----------|-----------------|-------------|----------------------------------|
